**Responsibilities:** I'm working here as a WordPress Programmer as a remote JOB. I get various kinds of projects there to help me to enhance my knowledge. It also helps me to increase my experience as I get different kinds of projects every time.

## PROJECT:

- **Zara Drone Website** || [Live site](#) || [GitHub Client Side](#) || [GitHub Server Side](#)  
**Technology Used:** HTML5, Bootstrap 5, React JS, Firebase Authentication, React Router, Node JS, Express, MongoDB, JWT token, private route, Admin Dashboard  
**Key Features:**
  - ❖ Admin Can add products, Manage all products(Can Delete Product), Manage all orders(Can Delete order and change status), and can make user to admin from admin dashboard.
  - ❖ Users can provide reviews and ratings from the user Dashboard, then that review and rating will show from the home page. Also, users can delete their own order from their dashboard.
  - ❖ Users can see private route systems, without Authentication, user can't access private routes, and users can Sign Up in this Application manually and using the Google authentication system.

➤ **Zara Resort Website** || [Live site](#) || [GitHub Client Side](#) || [GitHub Server Side](#)

**Technology Used:** HTML5, Bootstrap 5, React JS, Firebase Authentication, React Router, Node JS, Express, MongoDB.

**Key Features:**

- ❖ Users can add new services after login in from the Add new service page then visitors can see this service from the front page.
- ❖ On frontpage the user can see different types of rooms, user can book this room after clicking on the book now button, after clicking go to booking page after login website, then after a fill-up, all necessary information room will be booked for associated users, then the user can see that room on My order page.
- ❖ Users can see status pending on my order page, But If users go to manage all orders page then users can see options to change status and users can delete their own booked items and from my orders page and everyone's booked items from manage orders.

➤ **Zara Clinic Website** || [Live site](#) || [GitHub Client Side](#)

**Technology Used:** HTML5, Bootstrap 5, React JS, Firebase Authentication, React Router, Node JS, Express, MongoDB.

**Key Features:**

- ❖ Visitors can Sign Up and Login using Google Authentication and a normal sign up system.
- ❖ Here I have added a private route system, So without Authentication, Users can't access the Our services Details page.
- ❖ User will redirect the service Details page where clicked before login and the user can Sign Up in this Application manually and using Google authentication.
